

RB SURVEYING AND FIELD SERVICES

Ruggles & Bohm, P.A. provides a variety of land surveying services including boundary surveys, construction staking, ALTA surveys, topographic surveying, architectural surveys, engineering surveys, platting, and legal descriptions.

All surveying operations utilize state-of-the-art survey equipment including electronic total stations with automated data collection, and satellite global positioning receivers, which utilize similar, automated data collection. We can provide our clients with digital information in a variety of formats to assist in the planning, design and construction staking of engineering or architectural projects.

Ruggles & Bohm maintains field crews for the collection of surveying information. All data collection is software assisted to allow electronic processing with AutoDesk® and other computer assisted design and drafting software. Survey information collected on a project can be utilized in our engineering design processes and provided to other designers, allowing us to provide a seamless team design process.

In addition to traditional surveying services, Ruggles & Bohm can also provide construction inspection services for our projects. Whether it is our construction inspector or one of our project engineers, our staff can be on site to work with contractors and make sure a project is built right and meets applicable standards and codes. Services include inspection of pavement, water main, sanitary sewer, storm sewer/ drainage, and mass/ finish grading projects.

Ruggles & Bohm is registered through CCR and has completed ORCA certification for Federal projects. We are registered in Civil Engineering (NAICS 541330), Surveying (541370), and Landscape Architecture (541320). Contact us for more information on how we can help your team through Independent Technical Review (ITR) or design services.
